

Individual Support Plan

- The Individual Support Plan (ISP) is the framework that describes the individual and their needed supports and services.
- The team who develops the ISP may include, but is not limited to: the individual, family/guardian, providers, advocates, friends, Supports Coordinator and surrogate.
- The ISP is extremely important because it allows the individual to have control and make choices about important activities in his or her life.
- ISPs must be based on assessed need.
- ISPs must list all unpaid, natural supports as well as funded supports.
- The ISP is developed using a person centered planning process.
- The ISP must be reviewed at least annually. Changes can be made at any time throughout the year.
- The ISP form is made up of six main sections:
 - Individual Preferences
 - Medical
 - Health and Safety
 - Functional Information
 - Financial
 - Service and Supports
- The ISP is a standardized format and entered into the state Horne and Community Data Base. (HCSIS)
- Supports Coordinators monitor the ISP to assure that needed services are provided.
