For people with symptoms under home isolation:
You may discontinue home isolation and return to work under the following conditions:

- At least 3 days (72 hours) have passed since your fever went away without the use of fever-reducing medication
- AND improvement in respiratory symptoms (e.g., cough, shortness of breath)
- AND At least 7 days have passed since symptoms first appeared.

For healthcare personnel (HCP) with symptoms under home isolation:
HCP MUST be excluded from work until:

- At least 3 days (72 hours) have passed since your fever went away without the use of fever-reducing medication
- AND improvement in respiratory symptoms (e.g., cough, shortness of breath)
- AND At least 7 days have passed since symptoms first appeared.

After returning to work, HCP should:

- Wear a facemask at all times while in the healthcare facility until all symptoms are completely resolved or until 14 days after illness onset, whichever is longer.
- Be restricted from contact with severely immunocompromised patients (e.g., transplant, hematology-oncology) until 14 days after illness onset.
- Adhere to hand hygiene, respiratory hygiene, and cough etiquette in CDC’s interim infection control guidance (e.g., cover nose and mouth when coughing or sneezing, dispose of tissues in waste receptacles).
- Self-monitor for symptoms. Seek immediate re-evaluation from occupational health/primary care provider and do not work if symptoms recur or worsen.
