

EnviroScape Drinking Water & Wastewater Treatment Model

Is our drinking water safe? This model includes three demonstrations that can be done together or individually: drinking water sources and treatment, wastewater treatment, and biosolids. It also includes a bonus demo on stormwater. The demonstrations allow you to follow the path of water used in our communities – residential, commercial, rural, and urban – from source, to use, to treatment, then back into the river. The model includes a septic system, rural water sources, and stormwater discharged directly to a waterbody or set to the wastewater treatment plant.

To schedule this loaner model, contact Cori Trice, Watershed Coordinator at 610-925-4920 x 110 or ctrice@chesco.org
