## Interior Mushroom House Water

### Interior Drop Box

Drop boxes can be placed inside the mushroom houses to collect wash down water or any other water generated from the daily operations. The effluent is then transferred to a dirty water collection system located outside of the mushroom houses.

### Exterior Drop Box

Drop Boxes can also be placed outside the doors of the mushroom houses for the purpose of collecting the dirty water as it flows out the doors. Again it would be transferred to a dirty water collection system.

### Breezeway Channel

This breezeway channel is another way to collect water from washing down a dirty breezeway.
